

## SCOPE OF WORK

### Replacement of Fan Coils or Heat Pumps

- Protect the flooring in the work area with drop cloths.
- Surround the work area with a temporary barrier to prevent debris from contaminating the home and use a portable air cleaner with HEPA filtration.
- Technicians will wear personal protective equipment such as a mask that is rated N95 or better as well as disposable shoe protection and gloves.
- Once the old unit and materials have been removed these items will be placed in heavy-duty trash bags. These bags will be sealed when taken from the building to our work vehicles or disposal container.
- Mechanical cabinet will be cleaned and sanitized.
- Install new closed-cell insulation inside mechanical cabinet, install new unit with water shut-off valves, flexible hoses and thermostat.
- Perform start-up and test.
- When the work is completed, our technicians will remove all the tools, old equipment and materials and clean the workspace.
